

THE FUTURE IS NOW 100% ELECTRIC

AMT develops and produces zero-emission (rail) construction machines. Enabling the user to work 24/7 zero emission, safely and flexibly on and around the track.

Solutions for a better work environment

Together with ELEO, AMT develops and produces modular battery packs that can be used in both smaller and larger machines. Making use of multi-functional machines, your zero emission machine park can become more efficient.

The 100%-Electric drivetrain offers the possibility of a machine that is equivalent to the diesel version in characteristics such as power and feel, but quieter and with no harmful emissions. The modular concept with interchangeable battery packs allows the operator to work 24/7 zero emission, safe and flexible.

The modular concept allows battery packs to be exchanged and inter-connected in order to provide sufficient capacity for machines with larger outputs. The modular structure also allows the use of the latest battery technology with a higher energy density in the future. It is also possible to use hydrogen combined with a fuel cell to power the machines.

Our solutions are developed and produced together with Dutch specialists and manufacturers. As a result, you can count on systems that meet all applicable safety requirements, on accurate service and on machines that use the latest technology. We offer customised solutions for users, distributors and OEMs.
